

The results are in, and dairy producers agree...  
**REPRO RESULTS Open Check** blood test offers fast, accurate, affordable, and trusted non pregnancy detection.

## FAST

- Local processing lab allows for same day turn around.
- Non-invasive means of open diagnosis.
- Easy integration into current reproduction program.
- Experienced staff provides efficient support & pick up service.

## ACCURATE

- Scientifically proven to be 99.3% accurate in open detection for cows 28 days since last bred or greater.
- IDEXX specific PAG's sharply increase post conception compared to other available tests, significantly reducing false positive results (Fig. 1).
- Increased accuracy earlier in lactation (60 days in milk) as compared to other available tests (Fig.2).

## AFFORDABLE

- Reduce days open by re-inseminating non-pregnant cows quicker than palpation.
- Cost effective compared to conventional pregnant/open diagnosis.
- Utilize on-farm labor more efficiently.
